-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 25 June 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Claim Objections

Claims 7-9 and 16-18 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The claims are generally replete with intended use; the specific claims indicated are drawn solely to the intended use of the protective pieces made, which does not further limit the method of protecting the pieces as claimed, and therefore will simply be rejected along with their respective parent claims. Although some other claims included a limitation of intended use, as will be pointed out in the rejections below, they will still be further treated because these other claims are not drawn *solely* to intended use.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 6-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with idiomatic errors.

Further, the claims are drawn to a method yet appear to describe the product made (e.g. have been protectively coated, are connected to each other, connection is formed by welding,

Art Unit: 1754

etc.) rather than recite positive process steps in the method (e.g. protectively coating, connecting, welding, etc.).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6-21 rejected under 35 U.S.C. 102(b) as being anticipated by Bland et al. (2895747).

With respect to claims 6-9, 16-18, Bland et al. teaches (see Figure 4) a method of protecting pieces of equipment (32, 37) where the pieces have been protectively coated (38, 34) and are joined to each other by welding (41, 33) of the pieces together with joining pieces (39, 31). The equipment pieces and joining pieces are all steel, and the protective coating shown in the figures is an aluminum coating (Column 3, lines 38-41 particularly). Further limitations including operating temperatures for the equipment made, fluids to be used in the equipment made, and process in which the equipment made may be used merely recite intended use as claimed; nonetheless it would appear the method of Bland et al. would provide equipment capable of performing these intended uses as claimed.
